INDEX

S.No.	Name of Experiments	**Page No.**	**Sign/ Remark**
1.	Steganography using cmd	1-4	

OBJECTIVE :-

To hide text data inside an image file using the echo command in Command Prompt (CMD) as a basic form of steganography.

System Requirements:

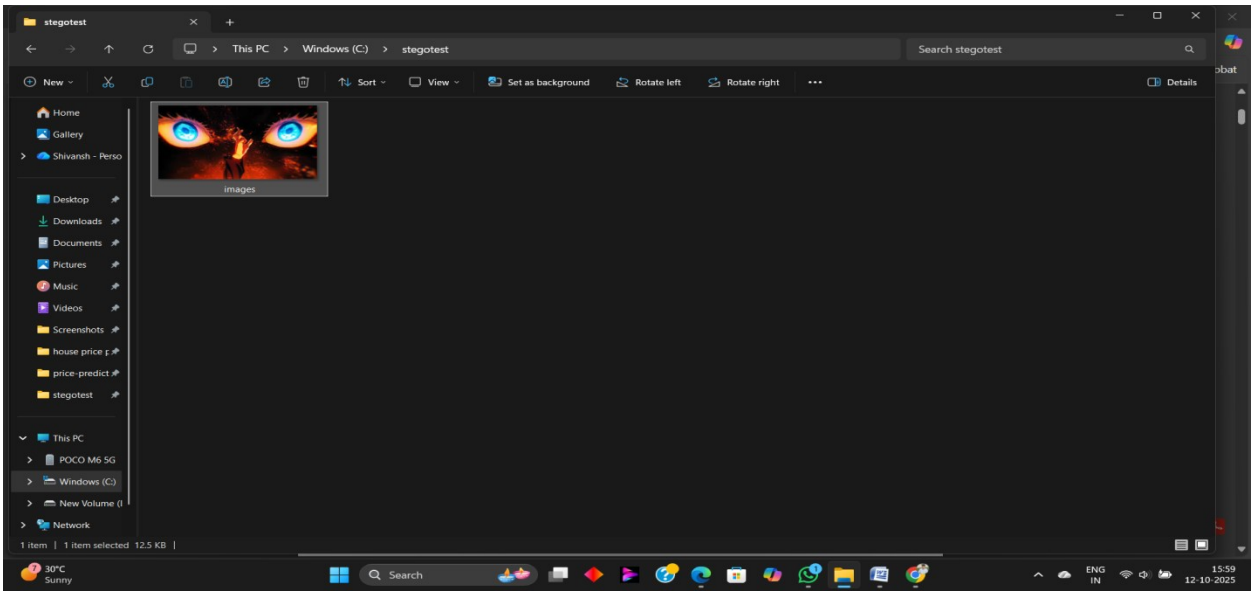
- **Operating System**: Windows (any version with Command Prompt)

- **Tools Required:**

1. Command Prompt (built-in)
2. A JPG or PNG image file (e.g., images.jpg)

- **Storage Location**:

1. A working directory (e.g., C:\StegoTest)

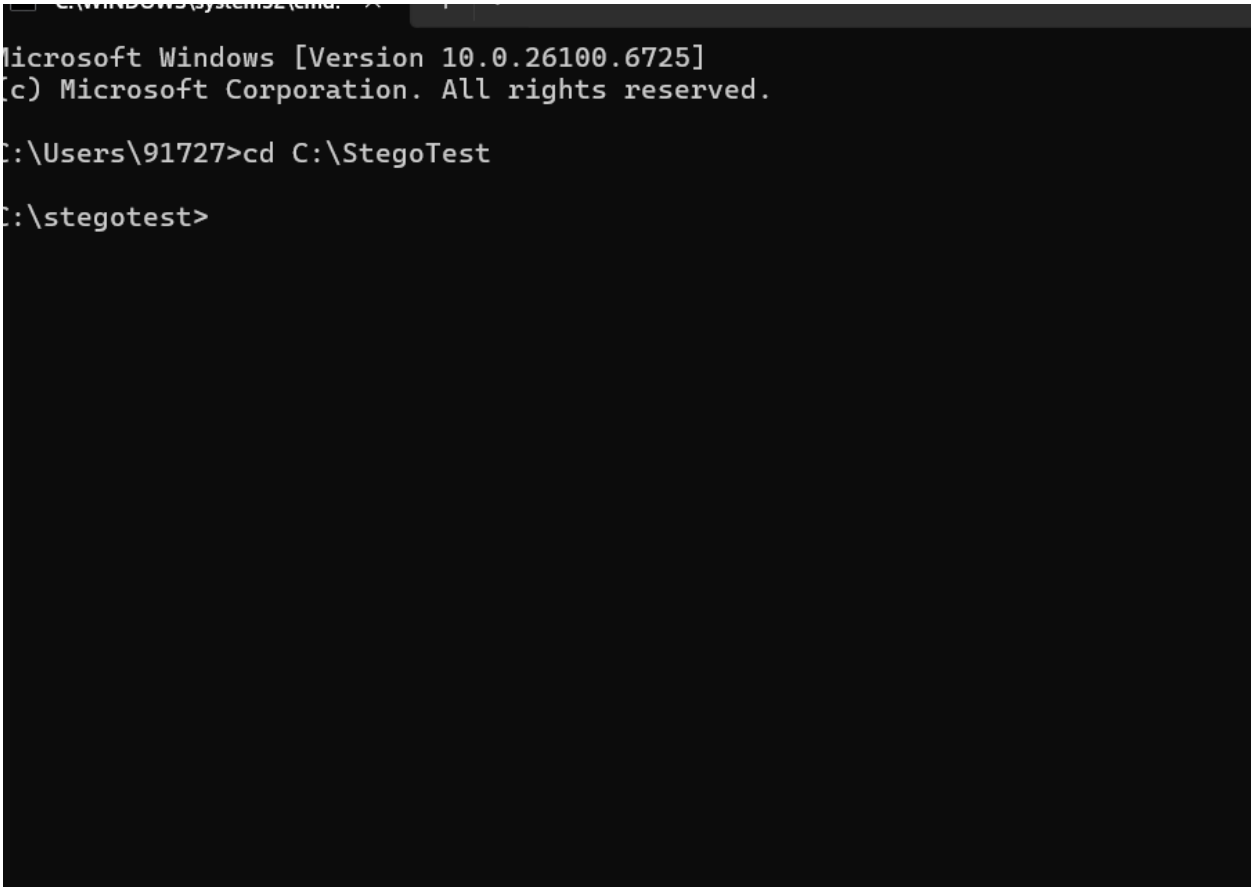


Procedure:

Step 1: Create and prepare the working folder

1. Create a folder named StegoTest in C:\stegotest

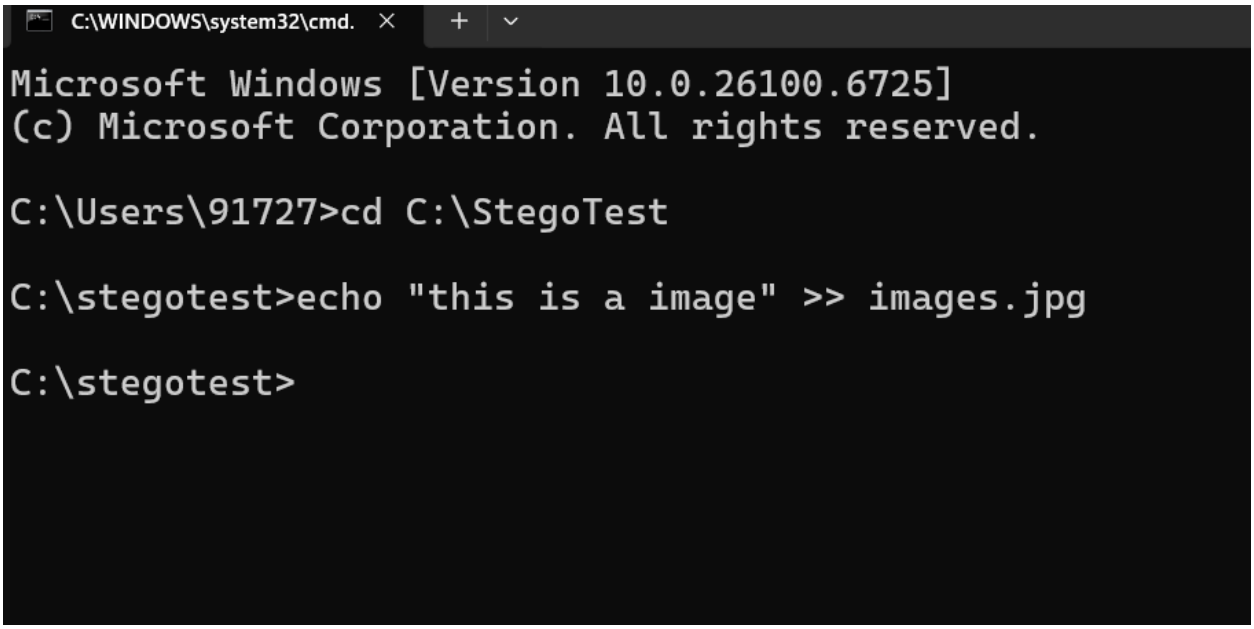
2. Place the image file you want to use (e.g., image.jpg) into this folder.



Step 2: Open Command Prompt and navigate to the folder

1. Press Win + R, type cmd, and press Enter to open Command Prompt.
2. Navigate to your working directory:

3. cd C:\StegoTest



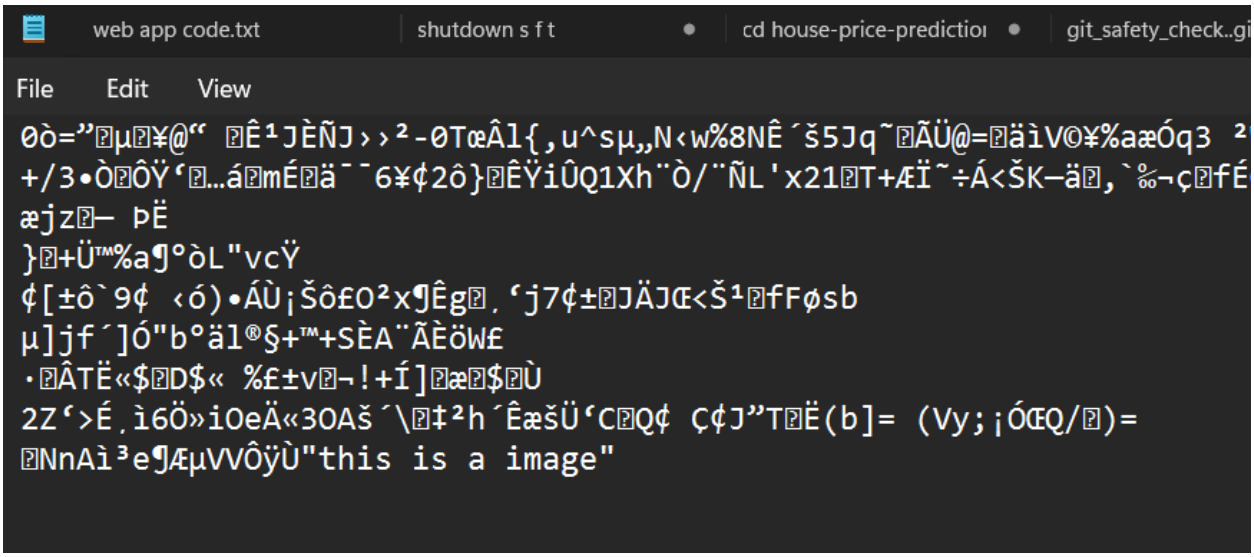
Step 3: Hide a secret message using echo command

Run the following command to append a message to the image file**:**

echo “This is a image” >> images.jpg

What this does:

- echo prints the message.
- >> appends it to the end of images.jpg in binary mode.
- The image remains viewable in any image viewer, but now contains hidden data.



Step 4: Verify the hidden message To check whether the message was added:

Option 1: Open with Notepad

notepad images.jpg

- Scroll down to the bottom to see the hidden message.

Option 2: Use more command

more < images.jpg

- This shows readable parts of the file including any appended text.
